

Status Report:

13th June - 30th June

The beginning of the coding period was very exciting, but at the same time it was very challenging. In this period the parser was developed.

1st July - 10th July

In this period further modifications were done to the parser code.

11th July - 25th July

In this period the initial code for the database was developed.

26th July - 10th August

In this period further modifications were done to the database.

11th August - 30th August

In this period the database code was modified to avoid and prevent SQL Injection attacks and it was integrated with the parser code.

1st September - 10th September

In this period the automated mail reply/forward part of the project was developed and integrated with the parser code.

11th September - 5th October

In this period the feedback collection website was developed using Flask.

6th October - 10th October

In this period all the different parts of the project developed so far are integrated and tested.

Still to be done:

The project is near completion as most of the planned part is complete. The following parts are left to be developed or integrated:

- Auto updation of the official NetBSD donor acknowledgement page based on the feedback received from the donors.
- Notification to the donor about the updation of the acknowledgement page.
